

ABSTRACT

A method of labeling of a container including a medication includes, in at least one embodiment, reducing the size of the label using a label apparatus and reducing
5 the label size using the label apparatus, applying a surface securing adhesive to at least one surface securing section of the label using an adhesive application apparatus, and attaching the at least one surface securing section of the label to the container with the securing adhesive. The
10 method also includes applying a label securing adhesive to the label to maintain the label in the reduced orientation.
